# LIST OF FIGURES

Page

Figure 2.1 The influence of land use on (a) specific conductance levels and (b) cation composition of streams (Walling and Webb, 1986) 14

Figure 2.2 Changes in conductivity following prolonged drought conditions (after Kelbe and Germishuyse, 1999) 16

Figure 3.1 Classification of hydrosalinity models according to Addiscot and Wagenet (1985) 22

Figure 3.2 Schematic break-through curves for various miscible displacement conditions (after Bresler, 1981) 28

Figure 3.3 Break-through curves for $Cl^-$, $^3H_2O$ and $Ca^{2+}$ (after Leij and Genuchten, 1999) 29

Figure 3.4 Salt movement in the soil profile (after Görgens *et al.*, 2001) 34

Figure 3.5 Salt uptake curves over time, showing both rapid (high *k*) and slow (low *k*) salt uptake (after Ferguson *et al.,* 1994) 36

Figure 3.6 Sequence of enrichment of "old" water prior to an event: (a) instantaneous mixing of "new" water during an event and (b) non-instantaneous mixing (after Ferguson *et al.*, 1994) 37

Figure 4.1 General structure of the *ACRU* agrohydrological modeling system (Schulze, 1995) 40

Figure 4.2 The *ACRU* agrohydrological modelling system: Concepts (Schulze, 1995) 41

Figure 4.3 An example of objects and their relationships as applied in a simplified soil system 44

Figure 4.4 Examples of object classes as conceptualised in *ACRU2000* (after Clark *et al.*, 2001) 48

Figure 5.1 Flow diagram of salt input mechanism to irrigated lands as accounted in the *PIrrigSaltInput* Process Object 57

Figure 5.2 Class diagram of *PIrrigSaltInput* Process and associated data and component objects 58

Figure 5.3 Class diagram of *PSubsurfaceSaltTra* Process and its associated component and data objects 60
Figure 5.4 Flow diagram of subsurface salt movement in non-irrigated lands 64
Figure 5.5 Class diagram of *PIrrigSubsurfSaltTransport* and its associated data and component objects 65
Figure 5.6 Class diagram of *PUpwardSaltTransport* Process and associated data and component objects 66
Figure 5.7 Flow diagram of upward salt movement in non-irrigated lands as represented in *ACRUSalinity* 67
Figure 5.8 An increase in subsurface TDS concentration with time based on the first order rate kinetics 69
Figure 5.9 Suggested values of critical stormflow response soil depth (m) according to climatic, vegetation and soil characteristics (Schulze, 1995) 72
Figure 5.10 Class diagram of *PRunoffSalinity* Process and its associated component and data objects 76
Figure 5.11 Flow diagram for determination of upper and lower net land segment areas 79
Figure 5.12 Class diagram of the *PLandSegmentSaltMovement* Process and associated component and data objects 80
Figure 5.13 Flow diagram of runoff salt load allocation from non-irrigated areas 82
Figure 5.14 Class diagram of *PIrrigatedAreaSaltMovement* Process and associated data and component objects 83
Figure 5.15 Runoff generation from impervious areas as conceptualised in *ACRU* model (Schulze and Tarboton, 1995) 84
Figure 5.16 Class diagram of *PImperviousAreaSaltMovement* Process and associated objects 85
Figure 5.17 Flow diagram of salt load determination and distribution from impervious areas 88
Figure 5.18 Reservoir water budget as conceptualised in *ACRU* model (Schulze and Smithers, 2002) 91
Figure 5.19 Class diagram of *PReservoirComponSalinity* Process and associated data and component objects 94
Figure 5.20 Class diagram of *PSaltStacking* Process and associated data and component objects 95

|---|---|---|
| Figure 5.21 | Plug-flow cells for the cases (a) when outflow is less than storage and (b) when outflow is greater or equal to storage (after Herold, 1980) | 96 |
| Figure 5.22 | Flow diagram of the *PSaltStacking* Process | 97 |
| Figure 5.23 | Class diagram of *PCatchmentSalinity* and associated component and data objects | 99 |
| Figure 6.1 | The U1H005 gauging weir at Camden | 103 |
| Figure 6.2 | Mkomazi River at upstream of the U1H005 gauging weir | 103 |
| Figure 6.3 | Land use classes of the Upper Mkomazi Catchment (from CSIR, using LANDSAT TM, 1996) | 105 |
| Figure 6.4 | Major geological formations of the Upper Mkomazi Catchment (after Council for Geoscience, 1999) | 106 |
| Figure 6.5 | Intra-and inter-annual trends of streamflow salinity in the Upper (U1H005) and Lower (U1H006) Mkomazi Catchments | 108 |
| Figure 6.6 | *ACRU* sub-catchment delineation of the Upper Mkomazi Catchment (after Taylor, 2001) | 110 |
| Figure 6.7 | Diagram of sub-catchment configuration for the Upper Mkomazi Catchment (after Taylor ,2001) | 111 |
| Figure 6.8 | Layout and direction of salt transport for the catchment used on code validation of channel and distributed hydrosalinity modeling processes | 121 |
| Figure 6.9 | TDS versus EC relationship as recorded in U1H005 (Camden) | 125 |
| Figure 6.10 | Monthly mean of daily observed and simulated streamflow TDS concentration at Camden (U1H005) for the calibration period | 127 |
| Figure 6.11 | Percentile curves of observed and simulated monthly mean of daily streamflow TDS concentration at Camden (U1H005) for the calibration period | 127 |
| Figure 6.12 | Daily observed and simulated streamflow TDS concentration values at Camden (U1H005) | 130 |
| Figure 6.13 | Monthly mean of daily observed and simulated streamflow TDS concentration values at Camden (U1H005) for the verification period | 131 |
| Figure 6.14 | Percentile curves of observed and simulated TDS concentration values at Camden (U1H005) for the verification period | 131 |
| Figure 7.1 | The effect of changes in salt uptake rate constant, *k*, on baseflow salinity (BFLOSA) and runoff salinity (RUNOSA) | 136 |

Figure 7.2 The effect of change in salt uptake rate constant on the topsoil salinity (TOPSSA), subsoil salinity (SUBSSA) and groundwater salinity (GWSA) 137
Figure 7.3 The impact of changes in value of the salt saturation parameter on runoff salinity (RUNOSA) and baseflow salinity (BFLOSA) 138
Figure 7.4 Sensitivity of the topsoil salinity (TOPSSA), subsoil salinity (SUBSSA) and groundwater salinity (GWSA) to changes in values of the salt saturation parameter 139
Figure 7.5 Sensitivity of baseflow salinity (BFLOSA) and runoff salinity (RUNOSA) in response to changes in initial soil horizon salinity 140
Figure 7.6 Daily simulated topsoil TDS concentration curves at different initial topsoil salinity (INITOPSSA) values 141
Figure 7.7 Daily simulated subsoil TDS concentration curves at different initial subsoil salinity (INISUBSSA) values 141
Figure 7.8 The influence of changes in initial soil moisture salinity on topsoil moisture salinity at different times during the year 143
Figure 7.9 The influence of changes in initial soil moisture salinity on subsoil moisture salinity at different times during the year 143
Figure 7.10 The influence of changes in initial soil moisture salinity on groundwater salinity at different times during the year 144
Figure 7.11 The impact of initial reservoir storage salinity on simulated daily reservoir storage salinity 145
Figure 7.12 Sensitivity of reservoir storage and outflow salinity to changes in reservoir initial storage salinity 145
Figure 7.13 Spatial variation of mean TDS concentration at sub-catchment outlets of the Upper Mkomazi Catchment 147
Figure 7.14 Simulated monthly average of daily TDS concentration and salt load at the outlet of the Upper Mkomazi Catchment (U1H005) 149
Figure 7.15 Impact of the proposed Impendle Reservoir on downstream streamflow TDS concentration at two reservoir sizes 150
Figure 7.16 The impact of forests on downstream streamflow TDS concentration 152
Figure 7.17 Impact of irrigation on downstream streamflow TDS concentration under different irrigation scheduling practices 153
