

TABLE OF CONTENTS

	Page
LIST OF FIGURES	xi
LIST OF TABLES	xv
LIST OF SYMBOLS AND ABBREVIATIONS	xvii
1. INTRODUCTION	1
2. SOURCES AND CONTROLLING FACTORS OF HYDROSALINITY	4
2.1 Sources of Hydrosalinity	4
2.1.1 Natural sources	4
2.1.2 Anthropogenic sources	5
2.2 Factors Controlling Hydrosalinity	7
2.2.1 Soil and geologic formations	7
2.2.2 Hydrologic and climatic factors	9
2.2.2.1 Rainfall	9
2.2.2.2 Irrigation water	10
2.2.2.3 Total evaporation	10
2.2.2.4 Runoff volume and flow components	11
2.2.3 Land use and land cover	12
2.2.4 Topographic characteristics	15
2.2.5 The effect of time	15
3. REVIEW OF HYDROSALINITY MODELLING APPROACHES	17
3.1 Types of Hydrosalinity Models	17
3.1.1 Calibration and parameter optimizing models	17
3.1.2 Parametric models	18
3.1.3 Stochastic models	18
3.1.4 Deterministic, physical conceptually based models	19

3.1.4.1	Mechanistic models	20
3.1.4.2	Functional models	20
3.2	Classification of Hydrosalinity Models Commonly Used in South Africa	22
3.3	Mechanistic Modelling Approach of Salt Balance and Movement in Soils	23
3.3.1	Diffusion	23
3.3.2	Mechanical dispersion	24
3.3.3	Convection and combined convective-diffusion transport	26
3.3.4	Miscible displacement	27
3.3.5	Anion exclusion	29
3.4	Simplified Modelling Approaches of Soil Salt Balance and Movement	31
3.4.1	Empirical and simplified functional approaches	31
3.4.2	Soil water and TDS balance modelling in the DISA hydrosalinity model	32
3.4.3	Salt generation	34
3.4.3.1	Salt generation in DISA model	34
3.4.3.2	Combined salt generation and mixing models	35
3.5	Conclusions	38
4.	DESCRIPTION OF THE <i>ACRU</i> AGROHYDROLOGICAL MODELLING SYSTEM	39
4.1	Background and Concepts of <i>ACRU</i> Model	39
4.2	<i>ACRU 300 Series</i> and Its Structural Limitations	41
4.3	<i>ACRU2000</i>	42
4.3.1	Object-oriented programming and the <i>ACRU2000</i>	42
4.3.2	Basic structure and objects of <i>ACRU2000</i>	45
5.	DEVELOPMENT OF THE HYDROSALINITY MODULE	49
5.1	Modelling Approach and Basic Objects in <i>ACRUSalinity</i>	49
5.1.1	Component objects	50
5.1.2	Data objects	50
5.1.3	Process objects	51
5.2	Subsurface TDS Balance and Baseflow Salinity	53
5.2.1	Total evaporation and the soil water balance as conceptualised in the <i>ACRU</i> model	53

5.2.1.1	Total evaporation	54
5.2.1.2	Soil water balance	55
5.2.2	Rainfall and irrigation water salt input	56
5.2.3	Subsurface salt movement	58
5.2.3.1	Downward subsurface salt movement	59
5.2.3.2	Upward subsurface salt movement	65
5.2.4	Salt generation	68
5.2.5	Effect of total evaporation on subsurface TDS balance	70
5.3	Determination of Surface Flow Salt Balance	71
5.3.1	Stormflow generation mechanism in <i>ACRU</i>	71
5.3.1.1	Stormflow generation	71
5.3.1.2	The concept of delayed stormflow	72
5.3.2	Stormflow and quick flow salinity	73
5.3.3	The effect of delayed stormflow on TDS balance determination	74
5.3.4	Runoff salinity and salt load	75
5.4	Salt Distribution to Reservoir and Channel Reaches	77
5.4.1	Runoff distribution in <i>ACRU</i>	77
5.4.2	Salt distribution from non-irrigated lands	79
5.4.3	Salt distribution from irrigated lands	82
5.4.4	Salt distribution from impervious areas	83
5.4.4.1	Hydrological responses of impervious areas as conceptualised in <i>ACRU</i> model	83
5.4.4.2	Determination and allocation of runoff salt load from impervious areas	84
5.5	Reservoir Salt Budget and Salt Routing	88
5.5.1	Reservoir water budgeting in <i>ACRU</i>	89
5.5.1.1	Gains to the system	89
5.5.1.2	Losses from the system	90
5.5.1.3	Surface area to storage relationship	91
5.5.2	Determination of TDS concentration of reservoir storage and outflows	92
5.5.3	The <i>PSaltStacking</i> Process Object	94
5.6	Channel Salt Movement and Distributed Hydrosalinity Modeling	97

6.	VALIDATION AND VERIFICATION	101
6.1	Description of the Upper Mkomazi Catchment	102
6.1.1	Climatological and hydrological conditions	102
6.1.2	Physiography	104
6.1.3	Land use and land cover	104
6.1.4	Geological formations	106
6.1.5	Salinity in the catchment	107
6.2	Previous Modelling Efforts in the Upper Mkomazi Catchment	108
6.2.1	DWAF pre-feasibility study	109
6.2.2	<i>ACRU</i> based simulation study	109
6.3	Setup of <i>ACRU2000</i> for the Upper Mkomazi Catchment	110
6.4	Basic Data Input Requirements and Data Preparation for <i>ACRUSalinity</i>	113
6.4.1	Rainfall and irrigation water TDS concentrations	113
6.4.2	Initial TDS concentrations of subsurface and reservoir water storage	114
6.4.3	Salt uptake rate and equilibrium values	115
6.5	Code Validation of the major <i>ACRUSalinity</i> Process Objects	116
6.5.1	Code validation of subsurface salt movement processes	116
6.5.2	Code validation of surface salt movement processes	119
6.5.3	Code validation of reservoir salt budgeting processes	119
6.5.4	Code validation of channel salt movement and distributed hydrosalinity modelling processes	121
6.6	Verification Against Observed Data	123
6.6.1	Observed daily flow and TDS concentration	124
6.6.2	Observed data conversion and patching	124
6.6.3	Calibration of the <i>ACRUSalinity</i> module	125
6.6.3.1	Time series and percentile curves	126
6.6.3.2	Statistical analysis	127
6.6.4	Verification result and discussion	129
6.6.4.1	Time series and percentile curves	129
6.6.4.2	Statistical analysis	131
6.7	Conclusions	133

7.	SENSITIVITY ANALYSIS AND CASE STUDY	134
7.1	Sensitivity Analysis of the Basic <i>ACRUSalinity</i> Parameters	134
7.1.1	Effect of the salt uptake rate constant on subsurface water and runoff salinity	135
7.1.2	The influence of changes in salt saturation value on runoff and subsurface water salinity	138
7.1.3	Effect of initial soil water salinity on time series subsurface water and runoff salinity	139
7.1.4	Effect of initial reservoir storage salinity on time series reservoir storage and outflow salinity	144
7.2	Some Applications of <i>ACRUSalinity</i> : Case Study in the Upper Mkomazi Catchment	146
7.2.1	Spatial and temporal variations in streamflow salinity within the catchment	146
7.2.1.1	TDS concentration at sub-catchment outlets and reaches	146
7.2.1.2	Temporal variations in streamflow salinity and catchment salt export	148
7.2.2	Modeling future scenarios	150
7.2.2.1	Evaluating the impact of a proposed reservoir on downstream TDS concentration	150
7.2.2.2	The impact of land use change on downstream TDS balance	151
7.3	Conclusions	154
8.	DISCUSSION AND CONCLUSIONS	156
9.	RECOMMENDATIONS FOR FUTURE RESEARCH	163
10.	REFERENCES	166
11.	APPENDICES	176
